

The LEC Mission

The Lenox Environmental Committee's mission is to promote environmentally sound policies and practices in and about the Town of Lenox. The Committee will work with town departments and businesses to implement environmentally responsible approaches to the delivery of services. The Committee will increase the public's awareness of ways to protect human health and the environment through education and outreach. By fostering environmentally friendly practices, the LEC aims to enhance the quality of life for our residents, visitors, and future generations.

Projects to Date:

Cities for Climate Protections:

Lenox has joined this international program and has conducted an inventory of energy consumption Town-wide. As a participating town, we have access to many ideas on reducing green house gas emissions.

Wind Energy:

With the assistance of the Massachusetts Energy Collaborative, Lenox is studying the feasibility of wind energy to help power our water treatment plant as well as feeding energy from a non-polluting source into the electric grid.

Idle Free Campaign:

The LEC has joined forces with a number of other organizations in a first in the state campaign to reduce engine idling resulting in cleaner, healthier air for all.

Green Up/Clean Energy Prog:

MassElectric customers are being encouraged to participate in a program that allows you to purchase your electricity from "green" sources.

Recycling Promotion:

In collaboration with Lenox's Board of Health, the LEC is working on ways to promote greater recycling rates. A "pay as you throw" approach is being researched.

YES! I am interested in the work of the LEC. Please let me know about future meeting dates..
